PROFESSIONAL SUMMARY

Results-driven Business and Data Analyst with an MSc in Business Analytics & Decision Science from the University of Leeds and robust hands-on experience across SQL, Advanced Excel, Power BI, and Python. Demonstrates a strong track record of designing executive dashboards, commercial forecasting models, and anomaly-detection workflows that translate complex multi-source data into actionable business intelligence. Proven expertise in cross-functional stakeholder engagement, workflow automation, and driving high analytics adoption to deliver measurable operational efficiencies.

CORE COMPETENCIES & TECHNICAL SKILLS

Data Analysis & Visualisation: Advanced Microsoft Excel (PivotTables, Power Query, XLOOKUP, dynamic financial modelling), Power BI (DAX, interactive dashboard design), SQL (complex joins, CTEs, window functions), Tableau.

Programming & Machine Learning: Python (Pandas, NumPy, Scikit-learn, XGBoost, Matplotlib, Plotly, Hugging Face Transformers for sentiment analysis), ETL pipeline architecture.

Business Intelligence & Strategy: Commercial reporting, KPI tracking, cash flow forecasting, master data management (MDM), predictive analytics, and executive presentation.

Enterprise Platforms & Tools: Salesforce, SAP ERP, Oracle database environments, Hyperion, Git, Streamlit.

EDUCATION

MSc in Business Analytics and Decision Science — University of Leeds **Sept 2023 – Sept 2024**
Leeds, United Kingdom | Grade: Merit (2:1)

- Core Modules: Advanced Statistical Analysis, Machine Learning, Forecasting & Predictive Analytics, Decision Support Systems, Database Management.

BSc in Physics — St. Berchmans College **June 2020 – May 2023**
Kottayam, India | Grade: First Class with Distinction

- Developed rigorous mathematical modelling, quantitative deduction, and statistical problem-solving competencies.

PROFESSIONAL EXPERIENCE

Business Analyst — Holy Faith Finance Pvt Ltd **Aug 2024 – Present**
Kochi, India

- Led the analytical discovery and build phases for strategic business intelligence use cases, gathering detailed data requirements and presenting executive reporting packs to cross-functional stakeholders.
- Constructed granular revenue models and commercial monetisation frameworks, improving financial viability assessments and establishing streamlined data governance across emerging business lines.
- Spearheaded operational change management initiatives, authoring standard operating procedures (SOPs) and conducting targeted training workshops for department heads on deployed BI dashboards, securing rapid user adoption.

Freelance AI Reasoning & Data Specialist — Outlier **Nov 2024 – May 2025**
Remote

- Evaluated, structured, and refined 50+ complex AI training prompts and model outputs spanning mathematical, verbal, and multi-modal logic to enhance quantitative reasoning accuracy.
- Delivered 30+ high-precision data annotation and Reinforcement Learning from Human Feedback (RLHF) projects consistently within rigorous delivery timelines.

PROFESSIONAL EXPERIENCE (CONTINUED)

Market Research Analyst Intern — Vee Tee Engineers **Apr 2023 – June 2023**
Kochi, India

- Conducted comprehensive market research across regional commercial property developments, competitor pricing benchmarks, and capital investment trends to guide strategic site-selection decisions.
- Synthesised multi-source property and demographic datasets in MS Excel using advanced lookup routines and dynamic pivot summaries to reveal latent pricing patterns and regional demand trends.
- Applied empirical statistical techniques to test commercial viability, preparing clear briefing slides and data visualisations for senior engineering and investment leadership.

TECHNICAL ANALYTICS PROJECTS

FinTech Fraud & Velocity Detection Engine | Advanced SQL & Data Integrity GitHub Repository ↗

- Architected a production-grade SQL analytical engine engineered to uncover illicit transactional patterns and account behaviour across enterprise financial log datasets.
- Implemented advanced sliding window partitions, multi-table self-joins, and heuristic filtering algorithms to isolate coordinated mule accounts, velocity spikes, and rapid fund liquidations.
- Optimised query execution plans to produce clean, audit-ready compliance reporting views for fraud investigation teams.

Predictive Lead Targeting & Forecasting Engine | Python, XGBoost & Plotly GitHub Repository ↗

- Engineered an end-to-end supervised machine learning pipeline utilising XGBoost classification to identify prospective clients with high propensity for term deposit conversions.
- Calibrated a 0.70 probability threshold to filter high-conviction leads, reducing outbound tele-calling overhead by 91.2% while securing a net commercial lift of +$8,775 in financial returns.
- Developed an interactive Plotly KPI dashboard to give marketing stakeholders real-time visibility into conversion probabilities and agent resource allocation.

Aspect-Based Text & Sentiment Analytics Portal | NLP, Hugging Face & Streamlit GitHub Repository ↗

- Designed and deployed an Aspect-Based Sentiment Analysis (ABSA) platform evaluating customer experience metrics and product review data from major digital streaming platforms.
- Leveraged Hugging Face transformer models to deconstruct unstructured customer feedback into granular feature-level aspects (e.g. UI/UX, subscription pricing, audio quality).
- Built and hosted an interactive Streamlit web application showcasing comparative sentiment trajectories and key drivers to inform product roadmap prioritisation.

PROFESSIONAL CERTIFICATIONS

IBM Certified Data Analyst — Comprehensive mastery of data pipelines, statistical analysis, Python data wrangling, and relational SQL database architecture.

Microsoft Office Specialist: Associate — Validated expertise in advanced spreadsheet engineering, data consolidation, formula automation, and visual presentation.
